QWATT

MAKES ENERGY CLAIMS FALSIFIABLE

QWATT helps small solar producers prove what they generated, through physics-gated, independently verifiable records anchored on Stellar.

STELLAR TESTNET · SANTIAGO, CHILE · STELLARBARRIO DEMO DAY

TRUST IS THE MOST EXPENSIVE PART OF SMALL SOLAR

SHARED ROOF

One meter, many neighbors, a permanent argument.

PPA CLIENT

Has to trust the seller's own meter.

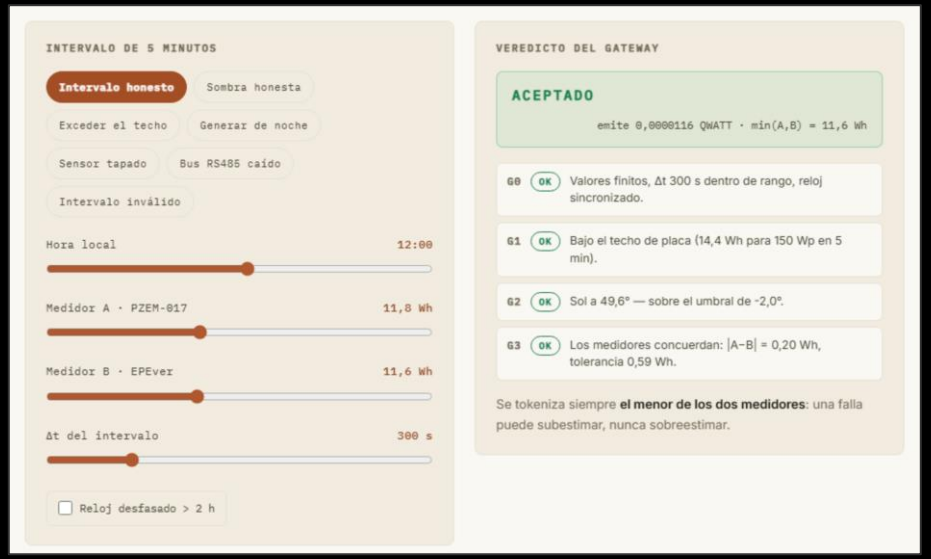

NET BILLING

One number on a utility bill. Ley 21.118.

Today's proof: site visits, statements, spreadsheets. **Verifying costs more than small solar earns.**

LIVE: TRY TO FALSIFY AN EVENT

- **Honest interval**
  11.8 / 11.6 Wh → ACCEPTED
- **Generate at night**
  sun at −41° → REJECTED
- **Your number on meter A**
  the four gates decide
- **Every verdict stamped**

RECORD, COUNTER AND RECEIPT CANNOT DIVERGE

ONE STELLAR TRANSACTION PER BATCH

manageData	qwatt.anchor.sha256	evidence hash
manageData	qwatt.cumulative_mwh	MWh counter
payment	QWATT	receipt

ALL THREE OR NONE

2 OF 3

Native multisig, no contract. Proposer, independent verifier, off-team signer. Sprint week 3.

≈ USD 1

Per site per year, anchoring every 5 minutes. Finality under 5 seconds.

WHAT EXISTS TODAY, AND WHAT DOESN'T

AUG 2026

Won the Stellar hackathon Santiago, then built QWATT

42.7M

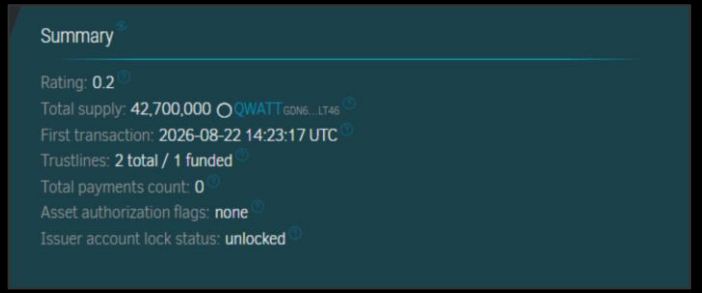

QWATT on testnet since Aug 22, with 2 trustlines

82

automated checks: 37 conformance · 24 adversarial · 21 ingestion

0

real MWh anchored, customers, revenue, mainnet — yet

stellar.expert · testnet asset QWATT

INSTAWARDS

SOW v1 rejected: it depended on one operator.

v3 answers with 2-of-3 multisig.

Sprint week 1 shipped.

NEXT: 7 UNATTENDED DAYS ON TESTNET

WEEK 1 ✓

Meter-agnostic ingestion, shipped

WEEKS 2–3

Evidence chain · 2-of-3 with an independent verifier

MID-OCTOBER

7 days of 2-of-3 anchored batches, public rejection log not empty

THEN

First real MWh on the 150 Wp bench and the 4.4 kWp roof, then a Soroban verifier

7 × 24 H OF 2-OF-3 ANCHORING · FAULTS INJECTED · REJECTIONS PUBLISHED

TWO FOUNDERS. THREE ASKS.

TEAM

Jae Hee (Jay) Kim
10 years in energy operations, Chile and Korea.
Operated 10 PMGD solar plants, 50 MW.

Diego Ostertag
Engineering and product.

THE ASK

1. An off-team signer: your key in the 2-of-3, by sprint day 10
2. A design partner with a shared rooftop array
3. An intro to a renewable-attribute registry or an auditor

NEXT: SEVEN DAYS WITHOUT TOUCHING ANYTHING.
